Please stop any measures that will limit the consumers ability to have access to XM radio providing "locally oriented" content, including the new XM Instant Traffic & weather channels. This kind of legislation does nothing but limit free enterprise and the advancement of technologies. Legislation of the same kind of unwarranted limits were attempted by the telephone monopolies when cellular phones were introduced. In retrospect the consumer is so much better off now with all of the options available. This is always the case when limits on free enterprise are avoided. Thank you for your service to us all.
